

# Tech High Performance Gel

Tech's High Performance Gel applied in its concentrated form handles the most challenging applications, such as today's low-profile performance tires. Tech's Gel applied to the tire beads allows them to seat on the rim at a much lower air pressure, reducing the risk of injury and damage to equipment. Tech High Performance Gel can be diluted with water for lower cost everyday use.

Tech's High Performance Gel can be used in any application where rubber needs to be lubricated relative to its dry state. It provides low friction to prevent twisting and cracking. Tires will not grab or seize onto metal rims, but will seat readily and smoothly. Similar products have been used in the pipe industry for many years as the preferred lubricant for assured seals with minimum distortion. Will not cause softening or swelling of rubber materials. It contains no harsh chemical components that can cause corrosion of metals or irritation to workers.

## Features

- Easy to apply
- Stable gel, ready to use or can be diluted with water
- Ideal for mounting low profile performance tires
- Petroleum and phosphate free
- Will not support bacterial growth
- Contains corrosion inhibitors
- Convenient 8 lb. pail
