

# Maintain Your Torque

**‘Listen for the Click’**

## VH609 – Valve Core Torque Tool

Even minor over-torquing of aluminum TPMS valves can cause valve damage that will cost you or the end user in excess of \$100.00 per valve. Reduce unnecessary road calls, ‘comebacks’ and warranty claims by utilizing the valve core torque tool. Precise installation of a valve core has never been more important than it is today with the TPMS sensor valves. Using the calibrated precision torque tool is an inexpensive way to promote proper valve core installation for all your tire valves and virtually eliminate any installation errors.

- Features:**
- Prevents under or over torquing, saving time and money.
  - Accurately tightens to 4 inch/pounds every time.
  - A must for the TPMS valves to maintain proper pressure.
  - Can be used as a core remover and precise core installer.
  - Prevents TPMS warnings due to low air pressure.
  - Prevents premature tire failure due to leaking valves.
  - Easy and simple to use.

---

## TPMS100 – 3/8” Drive Torque Wrench (20 – 200 inch/pounds)

TPMS manufacturer’s require a specific torque setting for all TPMS valve installations. The (CAT. NO.) meets all TPMS manufacturers requirements, including being guaranteed to meet or exceed Federal Specifications GGG-W-00686C.

**Features:**

**Tighten until you hear the ‘click’.**

- Ratcheting mechanism won’t over torque.
- Torque range: 20 to 200 in/lbs.
- Quick twist locking for torque adjustment.
- Calibrated & factory tested to an accuracy of +/- 4%.
- Solid steel heavy duty design with knurled handle.
- Etched markings for long term use.
- Includes molded storage case.

Also available: 3’8” Deep chrome socket for TPMS valve installation.

TPMS211 – 3/8” Drive, 11mm deep chrome socket

TPMS212 – 3/8” Drive, 12 mm deep chrome socket

**NOTE:** All products ordered and sold separately.

**Be precise every time by installing valve hardware with tire valve torque tools.**
