

Introducing...Tech Plus Tire Balancing Compound

We are proud to introduce Tech's New Improved tire balancing compound – **TECH PLUS**. We have combined the features associated with Tech balancing compound – **flowability, durability and the absence of static cling** – into a new tire balancing compound featuring all of our previous product benefits, **plus** is compatible with Tire Pressure Monitoring Systems.

What are the Changes?

- ◆ New **TECH PLUS** has micro beads larger and smoother than the old style. The new micro beads are specially coated to enhance flowability, and to avoid (static cling) sticking to the inside of the tire. This eliminates the need for extra powders.
- ◆ The larger microbeads are carefully calibrated and will not block TPMS sensor holes.
- ◆ A filtered valve core will no longer be required.
- ◆ **TECH PLUS** sizing and weight will remain the same. packets per case will remain the same.
- ◆ A nickel-plated long stemmed valve core will be provided with every packet which will prevent bonding with an aluminum valve stem and will protect against air loss. Nickel-plated valve cores are recommended in all valve applications.
- ◆ **TECH PLUS** also comes with a high temperature valve cap.
- ◆ **TECH PLUS** will have a distinctive proprietary color (red and clear).

Why the changes?

- ◆ Regulations now mandate Tire Pressure Monitoring Systems for passenger and light truck tires under 10,000 lbs GVW.
- ◆ The current Tech compounds are not suitable for use with TPM systems. The sensor holes are small and can easily be blocked with our current compounds.
- ◆ It was extremely important to have a tire balancing product that would work with the TPMS products. We believe the TPMS requirements will be expanded to medium truck and truck tires in the foreseeable future.

What has remained the same?

- ◆ **TECH PLUS** sizing and weight requirements per tire will remain the same.
- ◆ Case quantities will remain the same.
